Docs Blog Changelog

Build one JavaScript/TypeScript project that runs natively on all your users' devices.

Quick Start

Terminal Copy

```
- npx create-expo-app@latest
```

Then continue setting up your environment.

Create a universal Android, iOS, and web app

Start tutorial

Launch to app stores

Ship apps with zero config or no prior experience. Launch easily guides you through the technical stuff, directly from GitHub. No config or prior knowledge needed.

Try Launch ↗

Automate builds and releases with EAS Workflows

Start CI/CD Tutorial
